

## SN74LS145N

### ■ Product Introduction

The SN74LS145N is a BCD-to-Decimal Decoder / Driver, with open drain output structure (with 15 V outputs).It consists of eight inverters and ten four-input NAND gates.

### ■ Product Features

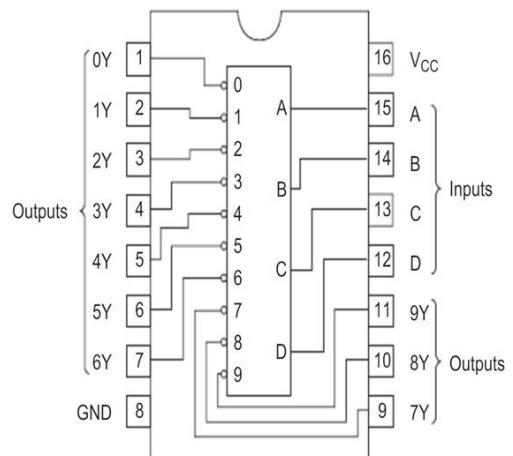

- BCD-to-Decimal Decoder / Driver.
- Open drain output structure (with 15 V outputs).
- Fully compatible with TTL input and output logic level
- Package : DIP16, SOP16

### ■ Product Applications

- Signal decoding processing.
- Industrial control applications
- Other application areasBattery-powered equipment

### ■ Package and Pin Assignment

| SOP16 or DIP16 |                |        |                |
|----------------|----------------|--------|----------------|
| Pin NO         | Pin Definition | Pin NO | Pin Definition |
| 1              | Output 0Y      | 16     | Supply VCC     |
| 2              | Output 1Y      | 15     | Input A        |
| 3              | Output 2Y      | 14     | Input B        |
| 4              | Output 3Y      | 13     | Input C        |
| 5              | Output 4Y      | 12     | Input D        |
| 6              | Output 5Y      | 11     | Output 9Y      |
| 7              | Output 6Y      | 10     | Output 8Y      |
| 8              | Supply GND     | 9      | Output 7Y      |

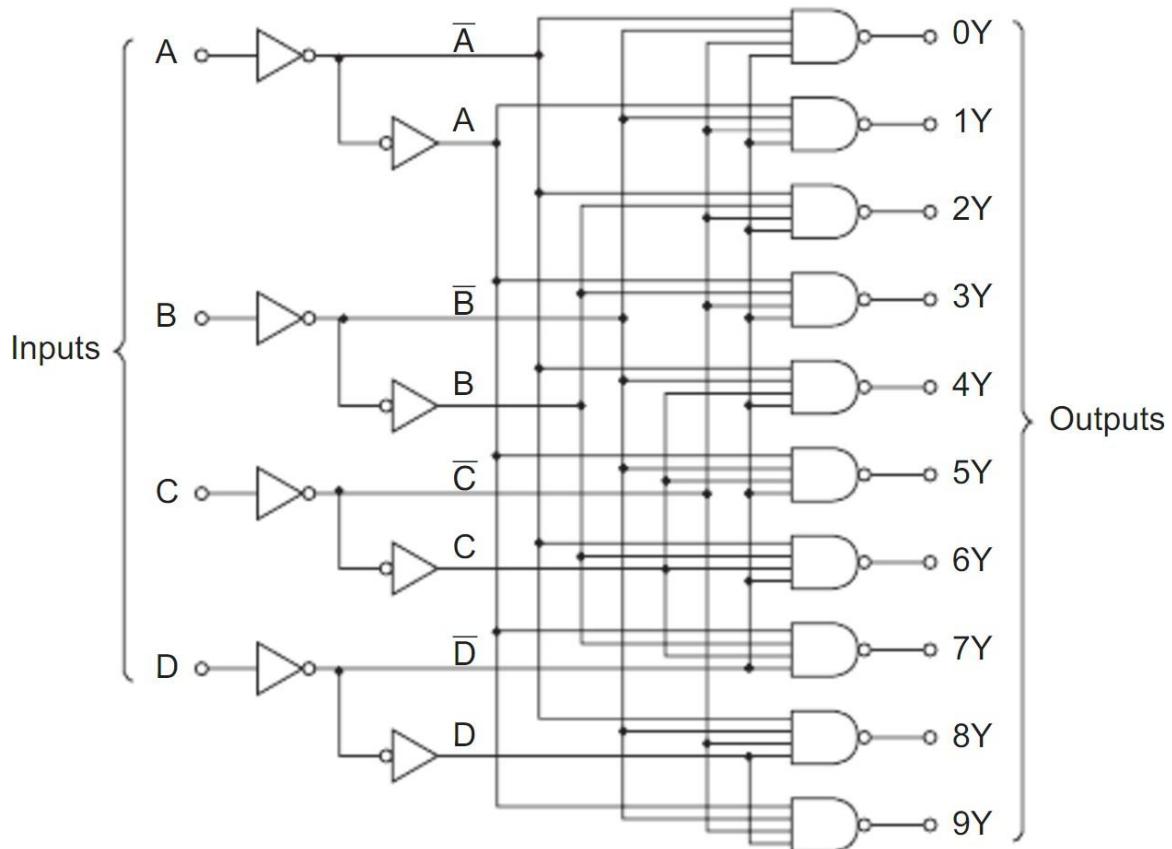

### ■ Absolute Maximum Ratings

| Item                  | Symbol          | Maximum Ratings | Unit   |
|-----------------------|-----------------|-----------------|--------|
| Supply voltage        | V <sub>CC</sub> | 7               | V      |
| Input voltage         | V <sub>I</sub>  | 7               | V      |
| Power dissipation     | P <sub>D</sub>  | 500             | mW     |
| Operating temperature | T <sub>A</sub>  | 0-70            | °C     |
| Storage temperature   | T <sub>S</sub>  | -65-150         | °C     |
| welding temperature   | T <sub>w</sub>  | 260             | °C,10s |

Note: the limit parameter is the limit value that cannot be exceeded under any condition. Once this limit is exceeded, it may cause physical damage such as deterioration of the product. At the same time, the chip can not be guaranteed to work properly when it is close to the limit parameters.

|  | t <sub>PLH</sub> | —   | 20  | —   | ns   |                              |  |

## ■ Testing Method

### 1、Test Circuit

### 2、Waveform

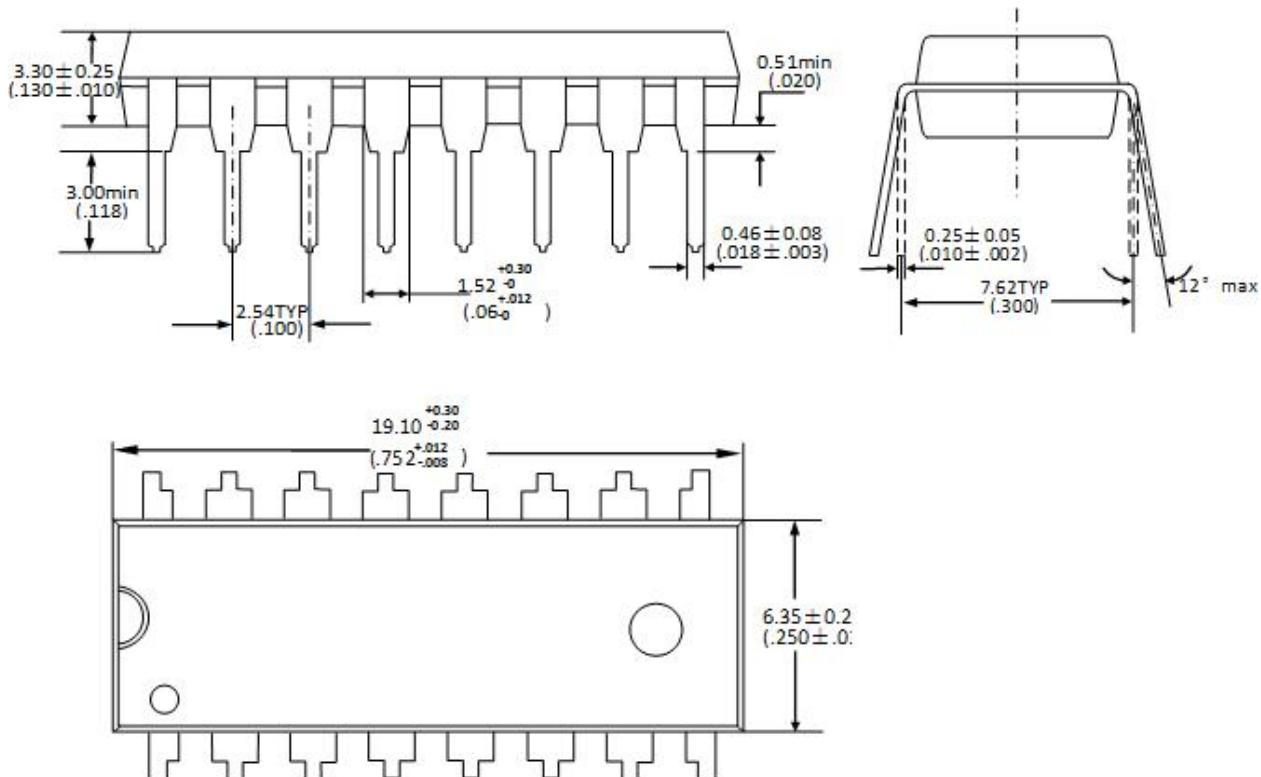

Note:

1. See Testing Table refers to the corresponding test items in the switch characteristic table.
2. the CL capacitor is an external patch capacitor (0603), which is connected to the output pin and the capacitor is near the chip GND.
3. Input: port input level, f=1MHz, D=50%, tr=tf or less 20ns;
4. Output: Y output test port (Out of Phase Output, In Phase Output)
